K. Salmon Brook.

Scale of one League.
REMARKS

The River here named the Humber at about 3 Leagues within the Entrance the stream is so rapid that no Vessel can go higher up it; there the French had a great Salmon Fishery. The Englishmen who stood there the Winter 1762 when the river was froze went up it on the Ice about 7 Leagues farther, where they came to a great lake across which they could see no land, according to the Reports of the Cape Breton Indians who the last Winter was at Canso; another River from that lake runs to the head of White Bay on the East end of the Island; it was this way the Cape Breton Indians used to pass encouraged by the French to kill our people employed in the Winter's seal fishery.
